DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Wong et al (Wong).

Wong's Figs. 1-3 and abstract show and describe a multiplication unit which is responsive to an instruction of a first type to partition the multiplication unit into two sub-tree structures to provide two 16 bit by 16 bit fixed point products and responsive to an instruction of a second type to configure the multiplication unit into a single data flow to provide a 32 bit floating point product. Wong formats the multiplier in accordance with that required for Booth encoding.

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 9-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims are directed to a method or process for performing multiplication via a mathematical algorithm to produce a multiplication result. The claims are not limited to a practical application of the mathematical algorithm because the multiplication result is not a tangible result because it is not a real-world result.

Drawings

4. The drawings filed 18 May 2004 failed to include sheet 2/8.
